

DACTYLCAM PRO **TRICKED OUT** ▶ **PICTURES**

Flying cameras on cables isn't new but the Tricked Out Pictures Dactylcam Pro makes cable cam shots extremely fast to set up and affordable. The Dactylcam Pro raises the bar from hobby shop level, motor integrated sleds with advanced electronics and precision control with the Pulse wireless controller. The Dactylcam Pro doesn't require large power hungry winches and multiple personnel. This point-to-point system has been designed to be set up as quickly as a standard head and crane package and with some rigging ingenuity your camera can be wherever you need it. In combination with the light-weight, gyro-stabilized SHOTOVER G1 the Dactylcam Pro will deliver entirely new shot possibilities in a safe, reliable and time effect manner.

DACTYLCAM PRO Features

- Programmable end stops
- Traction control
