

# SHOTOVER G1

► REMOTE HEADS AND CRANES

The Shotover G1 is the most impressive small gimbal in the market today. The level of stabilization and variety of applications can't be matched by any of its larger stabilizing competitors. The G1 was designed for drones, as its primary use, but is proving to be a true multi-use gimbal for camera car, cable cam, cranes, most any application due to its light-weight and compact structure. A wi-fi access point allows control over all the operator options and camera functions making it infinitely customizable. It's easy to underestimate its capabilities considering its incredible 4 kg weight but the G1 can carry an array of camera's and lens combinations including the Alexa 65, Mini LF or Sony Venice.

## SHOTOVER G1 FEATURES

- Operator wheels or joystick console
- Long range 900mhz radios
- Fiber slip ring
- Wireless video downlink
- Look down pan mode
- Remote camera control
